About us

Focus on Quality is our motto, and it is the inspiration behind SGP Group Outsourcing Company. We are the market leader in quality outsourcing services and since 2006, our experts have gained valuable experience and knowledge, which gives us the ability to provide competitive services on the international market. We are a valued business partner for major companies in industries such as automotive, electronics, food, consumer electronics, home appliances and others. Our expertise includes the selection, inspection,

sorting, and repair of parts, components, and finished products. Our reputation has allowed us to diversify our business and add cutting-edge services such as non-invasive quality control with X-Rays or serial CNC production. We are available to our Clients at any time and prepared to act immediately in the event of a failure. By choosing to cooperate with SGP Group Outsourcing Company, you will receive services at the highest level, full commitment from a qualified team, and an international reach.

FOCUS ON QUALITY

Operation philosophy

Open mind

We respond to the needs of our partners on an individual basis.

Effectiveness

We achieve success by efficiently pursuing the target.

Lessons learned

We learn from our experiences.

Advance Quality Control

We use modern technologies to meet the needs of our partners.

Internal, external and environmental respect

We consider social and environmental issues.

Professionally and according to standard

We follow the ISO 9001:2015 and IATF 16949 standards.

We are fully committed to optimizing and improving the efficiency of quality procedures. We assess our Partners' problems on an individual basis, delivering them personalized solutions that are tailored to their needs.

We view entrusted orders as challenges that allow us to reach the highest standards and eliminate errors. We like working for companies that follow "quality improvement" criteria.

SGP Quality Lab

SGP Quality Lab is a cutting-edge quality-engineering facility that reflects the Industry 4.0 concept. Since 2018, we have been providing our clients with support for part inspection (visual or with use of measurement technologies). Equipped with cutting-edge equipment, we conduct non-invasive examinations of finished products and components supplied by our partners. We use an industrial X-Ray cabinet called the Phoenix X|Cube for our services. This equipment allows real-time 2D inspections and also offers a 3D tomography option. It is particularly useful for inspecting castings, parts, and subassemblies in industries like automotive.

SGP Quality Lab also provides CNC milling (DN Solution), 3D scanning, reverse engineering, prototyping services using various 3D printing technologies and full support in dealing with complaint analyses. What's more, we have a large warehouse covering 5000 square meters and modern logistics facilities, which ensure on-time delivery.

We work on:

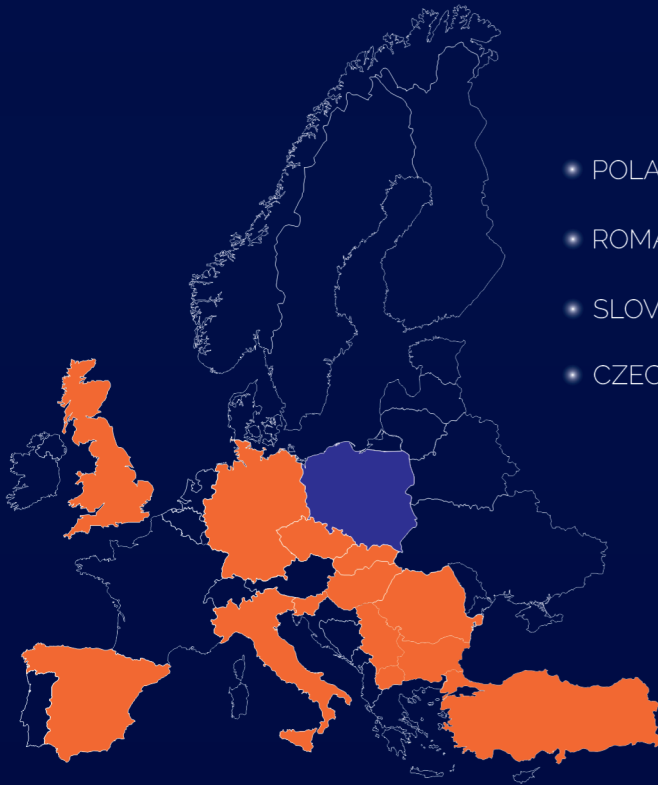

SGP Quality Framework

Quality management is in the DNA of our company. By focusing on it and continuously improving our services, we build lasting relationships with our clients, who become our trusted business partners. Due to our many years of experience and highly qualified staff of managers and engineers, we can guarantee you the highest level of support at every stage of the production process and in all project phases. With full commitment, we look for the best solutions (e.g. Advanced Quality Control, GP12, Safe Launch Plan, New Project Quality Wall) and during the process of defining the root cause of a problem (D4), we use the latest technologies, including X-Ray inspections or computer tomography. The quality of our services is also evidenced by the accreditations we possess to execute special statuses CSL1, CSL2.

Global reach

SGP Group has a large network of departments throughout Europe, allowing us to efficiently deliver services and meet the demands of our clients on a global scale. We are able to adapt quickly to unique regional needs and offer local support due to our presence in numerous countries.
